

Event Idea:

Technical Treasure Hunt-

Event Idea:

A simple treasure hunt can become more exciting by adding coding questions in it.

The basic idea is that the clue in this treasure hunt will be provided if you solve a question, for each set of question solved participant will be provided a clue, that will lead to participant one step closer to the treasure. We can also add some logical question apart from coding question.

Vision:

To make the event fun for participants at the same time test their skills and logic.

Venue:

Venue can be a single place (or multiple place), it can be held in Octagon or CA department lab.

For multiple place participant will have to solve a problem in one lab and search for next physical clue and then move to another lab for next clues.

Budget:

The event itself do not need a huge budget, only expenses will be the prize and physical clues (if any).

To attract a lot of crowds we can have prize for top 3 participants, and some small runner up prize for top 5 student. For that **10,000** will be enough.

People Needed:

5-6 people are enough to conduct the whole event smoothly.

Publicity:

Attractive posters, and prizes can be used for publicity.
